Quartus and Experior Laboratories Partner to Provide a Superior Client Experience for Aerospace Analysis and Test.

Quartus Engineering and Experior Laboratories are pleased to announce a partnership to provide integrated services in the Military, Aerospace, Space and beyond, a partnership that promises to provide a superior client experience. This partnership will be able to provide clients industry leading support tailored to meet their needs by leveraging facilities and expertise of both companies: Experior Labs' testing with of Quartus' analysis, design, and systems development capabilities. Our joint capabilities span from criteria development, test methodology and custom test fixturing, to pretest analysis, test execution of a wide variety of environmental conditions - vibration, acoustics, shock, static load, modal, thermal, vacuum, – and others, test control including force limiting, test reporting and model correlation.

“Experior Laboratories is honored to collaborate alongside the talented team at Quartus Engineering. We are excited about the opportunities to refine testing strategies to ensure continued mission success for our customers” - John Kim, CTO and Co-founder of Experior Laboratories

“Quartus is excited to expand upon the collaborative team that has been developing with Experior Laboratories in the support of client’s analysis, design, and test needs. With the flexibility, speed, and technical acumen of our combined teams, the two like-minded companies present an increased value to clients that are pushing the boundaries of rapid cutting edge development in aerospace and defense.” - John Williams, CEO of Quartus Engineering.
